

**Yakima County  
Public Services Department  
Planning Division**

**Yakima County's 2017 Review of its UGAs and Permitted Densities  
(as required by the Growth Management Act)**

**Urban Growth Area for  
City of Moxee**

**Staff Report**

**August 26, 2016**

Staff contact: Phil Hoge, Project Planner  
phil.hoge @co.yakima.wa.us, 574-2254

**1. Introduction**

The Growth Management Act (GMA) provides:

*“(a) Each county that designates urban growth areas under RCW 36.70A.110 shall review, according to the schedules established in subsection (5) of this section, its designated urban growth area or areas, and the densities permitted within both the incorporated and unincorporated portions of each urban growth area. In conjunction with this review by the county, each city located within an urban growth area shall review the densities permitted within its boundaries, and the extent to which the urban growth occurring within the county has located within each city and the unincorporated portions of the urban growth areas.*

*“(b) The county comprehensive plan designating urban growth areas, and the densities permitted in the urban growth areas by the comprehensive plans of the county and each city located within the urban growth areas, shall be revised to accommodate the urban growth projected to occur in the county for the succeeding twenty-year period ...”*

[RCW 36.70A.130(3)]

Subsection (5) of section RCW 36.70A.130 requires Yakima County and its cities to complete these Urban Growth Area (UGA) reviews and revisions by June 30, 2017.

[RCW 36.70A.130(5)(c)]

The mandates mentioned above are being met by two reports:

- a. Report 1 – Yakima County Population and Employment Projections and Allocations was issued on July 14, 2015 and establishes the number of people to accommodate in each of the County's 14 UGAs in year 2040. Attachment 2 is the excerpt from Report 1 showing the population projections for Moxee.
- b. Report 2 – UGA Land Capacity Analysis identifies the amount of land each of the County's 14 cities has for future growth within their Urban Growth Areas. This staff report includes the Land Capacity Analysis for Moxee's UGA (Attachment 3) and is part of Yakima County's efforts to meet its obligations under the RCWs cited above. It constitutes a recommendation to the County Planning Commission as well as the County's initial “show-your-work” exhibit as required by the GMA.

**2. Review of Urban Growth Area: Land Capacity Analysis**

a. Overview

A Land Capacity Analysis (LCA) is an essential component in reviewing a UGA. An LCA is a quantitative estimate of how much vacant land (i.e., land available for future urban

development) a city currently has and will require as it grows over the succeeding 20-year period. It begins with consultation between a county and each of its cities and towns to select a population growth projection from a range of population growth projections provided by the state Office of Financial Management (OFM). The population projection, together with a county employment growth forecast, is then allocated primarily to UGAs, to assist in sizing UGAs to accommodate future urban growth.

After reviewing OFM's most recent population projections for Yakima County, the Yakima County Planning Division issued a draft report on January 16, 2015 that allocated the projected population and employment growth among the county's 14 cities. In sharing the report with the county's cities and the Yakima Valley Conference of Governments, the Planning Division met with and requested comments on the draft allocations. After considering all comments received, the Planning Division issued a revised report dated July 14, 2015. This LCA report is based on the specific population projections for the City of Moxee as shown in Attachment 2.

Three terms will be used throughout this analysis. They will be used to describe potential growth as follows:

- i. Land in city. This is used to describe lands within the city limits.
- ii. Land outside city. This is used to describe the land between the UGA boundary and city limits.
- iii. Land in UGA. This is used to describe the area inside the city limits AND the land outside the city. It could also be described as i + ii = iii.

The LCA quantifies the amount of vacant land needed for Moxee's growth according to the analytical process (see Attachment 1) outlined in the "Urban Lands" section in the Land Use Element of Yakima County's Comprehensive Plan (*Plan 2015*). This acreage is then compared to the amount of vacant land currently within the UGA to determine if there is a surplus or a deficit of vacant land for future growth to year 2040. The general calculation is outlined below:

$$\begin{aligned}
 &\text{Acres Needed for Future Growth in the UGA}^1 \\
 &\quad - \text{Acres Currently Vacant in the UGA}^2 \\
 &= \text{Surplus (or Deficit) of Vacant Land in the UGA}
 \end{aligned}$$

b. Quantity of Land Calculations for Non-Industrial Uses

Yakima County's Division of Geographic Information Services (GIS) determined the current acreage of developed residential, commercial & retail, and community facilities. GIS also determined the acreage of current vacant land and partially vacant<sup>3</sup> land in each zoning

<sup>1</sup> Acres needed for Future Growth = Vacant acres needed for: Residential uses + Commercial uses + Community Facilities + Streets.

<sup>2</sup> Acres currently vacant = Vacant acres zoned or owned for: Residential uses + Commercial uses + Community Facilities (this excludes Environmentally Constrained lands and Tribal lands).

<sup>3</sup> Parcels classified as "partially vacant" are those greater than one acre and have more than \$10,000 in assessed improvements. For such parcels GIS counts one acre as developed and counts the remainder acreage as vacant (i.e.,

district to arrive at the figures used in the LCA spreadsheet (Attachment 3). These GIS data are reported and depicted geographically in Attachment 4.

The Land Capacity Analysis calculations are described below. The spreadsheet in Attachment 3 (“UGA Land Capacity Analysis”) performs the calculations and provides additional information.

- 1) Population and Households Analysis: Based on Moxee’s projected 2015-2040 population growth, this analysis estimates 654 additional households will be added to the city’s population by the year 2040.

<b>2040 population forecast for city (County Planning)</b>	<b>7,701 people</b>
<b>2015 population in city (OFM’s April 1 estimate)</b>	<b>3,810 people</b>
<b>Population increase in city 2015-2040</b>	<b>3,891 people</b>
<b><u>Average household size in city (2010 Census)</u></b>	<b><u>3.26 people</u></b>
<b>Additional households in city 2015-2040 (3,891 ÷ 3.26)</b>	<b>1,194 households</b>

- 2) Future Residential Land Need: The acreage needed for future residential growth through 2040 was calculated by assuming an average future density of 8,500 sq. ft. of land for each household (i.e., 5.1 dwelling units per acre) and multiplying this amount by the number of projected new future households:

$$\mathbf{8,500\ sq.\ ft.\ x\ 1,194\ households = 10,149,000\ sq.\ ft.\ /\ 43,560\ sq.\ ft.\ (1\ acre) = 233\ acres}$$

- 3) Future Commercial & Retail Land Need: The acreage needed for future commercial and retail growth through 2040 was calculated by multiplying the projected population increase by the current per capita acreage of developed commercially-zoned lands within the city after subtracting the acreage classified for community facilities (as determined by GIS analysis):

$$\mathbf{3,891\ people\ x\ 0.0045\ acres\ per\ capita = 18\ Acres}$$

- 4) Future Community Facilities Land Need: The acreage needed for future community facilities growth through 2040 was calculated by multiplying the projected population increase by the current per capita acreage of developed community facilities land within the city (as determined by GIS analysis):

$$\mathbf{3,891\ people\ x\ 0.0189\ acres\ per\ capita = 74\ Acres}$$

- 5) Future Streets Land Need: The acreage needed for future rights-of-way to accommodate streets and utilities through 2040 was calculated by multiplying the acreage needed for future residential, commercial & retail, and community facilities by 15%:

Residential acreage needed	233 Acres
+ Commercial/retail acreage needed	18 Acres
+ Community facilities acreage needed	74 Acres
= Subtotal	325 Acres
<b>Total streets acreage needed (Subtotal x 0.15)</b>	<b>49 Acres</b>

---

available for development). Note: Not all parcels meeting these criteria are classified as partially vacant. Aerial photo interpretation, local knowledge, & city input are used to limit this classification mostly to parcels with homes.

6) Land Capacity Analysis for Non-Industrial Uses

Next, the needs for land identified above are compared with the amount of existing vacant land to determine if there is currently a surplus or a deficit of vacant land within the City and the UGA to accommodate projected growth through 2040. The calculations are shown in Attachment 3 under Section “6 – Land Capacity Analysis” and summarized below:

Total amount of vacant land needed in UGA for future growth (excluding industrial growth): Adding the needed acres from the categories above results in the total acreage calculated below:

Acres needed for future residential uses <sup>4</sup>	268 Acres
+Acres needed for future commercial & retail uses <sup>4</sup>	21 Acres
+Acres needed for future community facilities <sup>4</sup>	85 Acres
=Total vacant acres needed for future non-industrial uses <sup>4</sup>	374 Acres

Using the figures in Attachment 3, Table 1 summarizes whether each zoning group has a surplus or a deficit of vacant land to accommodate growth through 2040:

<b>Table 1: Land Capacity Analyses (LCA) Summary – Excluding Industrially-zoned Land</b>			
Zoning Group	Within City Limits	Outside City Limits & Within <b>Current</b> UGA	<i>Total: Within City Limits and Within <b>Current</b> UGA</i>
Residential <sup>4</sup>	Deficit: 61 acres	Vacant: 510 acres	<i>Surplus: 449 acres</i>
Commercial <sup>4</sup>	Deficit: 3 acres	Vacant: 0 acres	<i>Deficit: 3 acres</i>
Community Facilities <sup>4</sup>	Deficit: 81 acres	Vacant: 0 acres	<i>Deficit: 81 acres</i>
Total of above Zoning Groups <sup>4</sup>	Deficit: 145 acres	Vacant: 510 acres	<i>Surplus: 365 acres</i>

Using the figures in Attachment 3, Table 2 summarizes whether the city and the UGA have a surplus or a deficit of vacant land to accommodate growth through 2040:

<b>Table 2: LCA Summary – In City and In UGA – Excluding Industrially-zoned Land</b>
<b>Current UGA</b>
Capacity for Growth within City:
229 (Acres of currently vacant land in City)
- 374 (Acres needed for growth)
= 145 (Deficit of vacant acres in City)
Capacity for Growth in the <b>Current</b> UGA:
510 (Acres of currently vacant land outside the city)
+ 229 (Acres vacant within City)
- 374 (Acres needed for growth)
= 365 (Surplus of vacant acres within the Current UGA)

<sup>4</sup> Including associated streets

Computed Market Choice Factor (MCF) and “Years of Growth” (excluding Industrial growth)

One way of quantifying the surplus (or deficit) of vacant land in a city and within its UGA is to express the surplus (or deficit) as a percentage of the amount of vacant land that is needed for growth over the 25-year period from 2015 to 2040. For example, if a city has 120 vacant acres and needs 100 vacant acres for future growth, it has 20% more vacant land than needed for growth. So the Computed MCF is 20%, as calculated below:

$$[(\text{acres currently vacant}) \div (\text{acres needed for future growth})] - 1.00 = \text{Computed MCF \%}$$

$$\text{Example: } [120 \text{ acres} \div 100 \text{ acres}] - 1.00 = 0.20 = 20\%$$

An additional way of quantifying the surplus (or deficit) of vacant land available for future growth is to express the surplus (or deficit) as the number of years it would take to develop all the vacant land at the projected future growth rate. This metric is a function of the MCF. For example, if a city has a 0% MCF, this means that the acres of vacant land are equal to the number of acres needed for growth over the 25 year period from 2015 to 2040, so it has enough land for 25 years of growth, as calculated below. If a city has a MCF of 100%, this means that it has twice the number of vacant acres available as are needed for 25 years of growth, so it has enough vacant land for 50 years of growth, as calculated below:

$$(\text{Computed MCF} + 1) \times 25 \text{ years} = \text{years of growth available}$$

$$\text{Example 1: } (0\% \text{ MCF} + 1) \times 25 \text{ years} = 25 \text{ years of growth available}$$

$$\text{Example 2: } (100\% \text{ MCF} + 1) \times 25 \text{ years} = (1 + 1) \times 25 \text{ years} = 50 \text{ years of growth available.}$$

The figures for both the “MCF” and “years of growth” metrics for Moxee are provided in Table 3.

<b>Table 3: Moxee’s Computed MCF and Years of Growth Available - Excluding Industrially-zoned lands</b>			
	Within the city	Outside the city and within the Current UGA	Within the <b>Current</b> UGA
Computed MCF	-39%	N/A	98%
Years of growth available	15 years	35 years	50 years

c. Future Industrial Land Needs

As provided by the analytical process (see [Attachment 1](#)) outlined in the “Urban Lands” section in the Land Use Element of Yakima County’s Comprehensive Plan (*Plan 2015*), the amount of land needed for future industrial uses “is based on the city’s economic development strategy and is not contingent on future population.”

Neither Moxee nor County staff are proposing to expand the UGA for industrial purposes or to rezone any lands within the UGA to or from M-1 (Light Industrial).

The GIS analysis provides the following acreages of industrially-zoned lands ([Attachment 3](#), Section “7 – Future Industrial Land Need”):

	<i>Based on Current Zoning</i>	<i>Based on Moxee's Proposed Rezones</i>	<i>Based on County Staff's Recommended Rezones</i>
	Acres	Acres	Acres
Current developed industrially-zoned land in city	239	239	239
Current developed industrially-zoned land outside city	0	0	0
Current vacant industrially-zoned land in city	463	463	463
Current vacant industrially-zoned land outside city	93	93	93
Industrial acres to add to UGA	0	0	0
Industrial acres to remove from UGA	0	0	0

### 3. Review of Densities Permitted in the UGA

In addition to reviewing Moxee's UGA as done above, RCW 36.70A.130(3)(a) requires Yakima County to review the densities permitted within both the incorporated and unincorporated portions of the UGA to ensure projected growth may be accommodated.

The City of Moxee has four Residential zoning districts within its city limits and the County has three Residential zoning districts within the UGA and outside of the City. The zoning districts and their corresponding minimum lot sizes and maximum densities are as follows:

<b>Table 4: Permitted Densities Under Current Zoning</b>		
<b>City of Moxee Zoning</b> (Moxee Municipal Code Title 17)		
<b><i>Zoning District</i></b>	<b><i>Minimum Lot Size</i></b>	<b><i>Maximum Density</i></b>
RR (Rural Residential)	½ acre	2 dwelling units per acre
R-1 (Single-Family Residential)	7,000 sq. ft.	6 dwelling units per acre
R-2 (Single-Family and Two-Family Residential)	5,000 sq. ft.	12 dwelling units per acre
R-3 (Multifamily Residential)	4,000 sq. ft.	20 dwelling units per acre
<b>Yakima County Zoning</b> (YCC Title 19)		
<b><i>Zoning District</i></b>	<b><i>Minimum Lot Size</i></b>	<b><i>Maximum Density</i></b>
R-1 (Single Family Residential)	7,000 sq. ft. for single family residence 4,000 – 8,000 sq. ft. (depending on DU type)	7 dwelling units per acre
R-2 (Two-Family Residential)	7,000 sq. ft. for single family residence 3,500 – 7,000 sq. ft. (depending on DU type) 1,750 sq. ft. per unit for Multifamily dwellings and Master Planned Development	7 dwelling units per acre 12 dwelling units per acre 18 dwelling units per acre
R-3 (Multi-Family Residential)	7,000 sq. ft. for single family residence 3,500 – 7,000 sq. ft. (depending on DU type) 1,750 sq. ft. per unit for Multifamily dwellings and Master Planned Development	7 dwelling units per acre 12 dwelling units per acre 24 dwelling units per acre

There are currently 194 vacant acres of residentially-zoned land in Moxee's city limits (excluding land zoned Rural Residential). Assuming Moxee's maximum allowed R-1 density of 6 dwelling

units (DUs) per acre, the vacant 194 acres of residentially-zoned land in Moxee will accommodate 1,274 dwelling units (including associated streets):

194 acres x 85% (i.e., 15% is subtracted for streets) = 165 acres available for dwelling units;  
165 acres x 6 DU/acre = 990 dwelling units.

Therefore the 1,194 dwelling units projected through 2040 could probably not be accommodated by the City's current development regulations, unless the higher densities allowed in the vacant R-2 and R-3 areas are utilized, and provided that urban water and sewer services are concurrently provided.

Assuming the County's maximum density of 7 dwelling units per acre, the existing 510 acres of residentially-zoned land outside of the city could accommodate an additional 2,023 dwelling units (including associated streets):

510 acres x 85% (i.e., 15% is subtracted for streets) = 433 acres available for dwelling units;  
433 acres x 7 DU/acre = 3,031 dwelling units.

Therefore the 1,194 dwelling units projected through 2040 could be accommodated by the County's current development regulations, provided that urban water and sewer services are concurrently provided. In addition, the LCA indicates that future commercial and community facilities could also be accommodated within the City and UGA.

#### **4. City/County Collaboration**

County staff and Moxee's representatives discussed and met on several occasions during 2015 and 2016 to discuss the Land Capacity Analysis and reached general agreement on the vacant/developed classifications of each parcel. After County planning staff shared the draft LCA with the City, Moxee indicated that it would propose the following changes within and to its UGA, as depicted by Attachment 7:

- Remove some residentially-zoned land (Area 3) from the UGA in exchange for adding land to the UGA elsewhere (Area 4);
- Rezone the R-1 parcels south of SR 24 and north of Postma Rd. (Areas 1 & 2) to GC (General Commercial) for consistency with Moxee's comp plan. Moxee's comp plan has designated this area for future commercial uses since 2000; however, Yakima County has zoned it R-1 since that time.

County staff concurs with all the above UGA land swap and rezones with the possible exception of rezoning the 6 parcels constituting Area 1. These 6 parcels all have individual homes, which would become non-confirming uses if they were rezoned to Commercial. Therefore, County staff recommends the 6 parcels remain zoned R-1, unless their owners support being rezoned to GC.

Attachment 5 provides the UGA Analysis for Moxee's proposal and Attachment 6 provides the UGA Analysis for County staff's recommendation. The LCAs of each are provided in the corresponding columns in Attachment 3. Both Moxee's proposal and County staff's recommendation would reduce the "years of growth" in Moxee's UGA from 50 years to 49 years

Using the figures in Attachment 3, Table 5 summarizes whether each zoning group would have a surplus or a deficit of vacant land to accommodate growth through 2040, based on Moxee's proposed rezones and County staff's recommended rezones:

<b>Table 5: Land Capacity Analyses (LCA) Summary – Excluding Industrially-zoned Land</b>					
		<i>Based on Moxee's Proposed Rezones</i>		<i>Based on County Staff's Recommended Rezones</i>	
Zoning Group	Within City Limits	Outside City Limits & Within <b>Current</b> UGA	<i>Total: Within City Limits and Within <b>Current</b> UGA</i>	Outside City Limits & Within <b>Current</b> UGA	<i>Total: Within City Limits and Within <b>Current</b> UGA</i>
Residential <sup>4</sup>	Deficit: 61 acres	Vacant: 448 acres	<i>Surplus: 387 acres</i>	Vacant: 448 acres	<i>Surplus: 387 acres</i>
Commercial <sup>4</sup>	Deficit: 3 acres	Vacant: 56 acres	<i>Surplus: 53 acres</i>	Vacant: 56 acres	<i>Surplus: 53 acres</i>
Community Facilities <sup>4</sup>	Deficit: 81 acres	Vacant: 0 acres	<i>Deficit: 81 acres</i>	Vacant: 0 acres	<i>Deficit: 81 acres</i>
Total of above Zoning Groups <sup>4</sup>	Deficit: 145 acres	Vacant: 504 acres	<i>Surplus: 359 acres</i>	Vacant: 504 acres	<i>Surplus: 359 acres</i>

Using the figures in [Attachment 3](#), Table 6 summarizes whether the city and the UGA would have a surplus or a deficit of vacant land to accommodate growth through 2040, based on Moxee's proposed rezones and County staff's recommended rezones:

<b>Table 6: LCA Summary – In City and In UGA – Excluding Industrially-zoned Land</b>	
<b>Based on Moxee's Proposed Rezones</b>	<b>Based on County Staff's Recommended Rezones</b>
<b>Current UGA</b>	<b>Current UGA</b>
Capacity for Growth within City:	Capacity for Growth within City:
229 (Acres of currently vacant land in City)	229 (Acres of currently vacant land in City)
- 374 (Acres needed for growth)	- 374 (Acres needed for growth)
= 145 (Deficit of vacant acres in City)	= 145 (Deficit of vacant acres in City)
Capacity for Growth in the <b>Current</b> UGA:	Capacity for Growth in the <b>Current</b> UGA:
504 (Acres of currently vacant land outside the city)	504 (Acres of currently vacant land outside the city)
+ 229 (Acres vacant within City)	+ 229 (Acres vacant within City)
- 374 (Acres needed for growth)	- 374 (Acres needed for growth)
= 359 (Surplus of vacant acres within the Current UGA)	= 359 (Surplus of vacant acres within the Current UGA)

The figures for both the "MCF" and "years of growth" metrics for Moxee, based on Moxee's proposed rezones and County staff's recommended rezones, are provided in Table 7.

<b>Table 7: Moxee's Computed MCF and Years of Growth Available - Excluding Industrially-zoned lands</b>					
		<b>Based on Moxee's Proposed Rezones</b>		<b>Based on County Staff's Recommended Rezones</b>	
	Within the city	Outside the city and within the Current UGA	Within the <b>Current</b> UGA	Outside the city and within the Current UGA	Within the <b>Current</b> UGA
Computed MCF	-39%	N/A	96%	N/A	96%
Years of growth available	15 years	34 years	49 years	34 years	49 years

**5. Proposed Revised Plan Designations within the Unincorporated UGA**

Attachment 8 ("Moxee Proposed Urban Plan Designations and Zoning Map") depicts the detailed urban comp plan designations and zoning that County planning staff are proposing for the unincorporated UGA if Moxee's proposals to swap lands with the UGA and to rezone the unincorporated UGA are approved.

Attachment 9 ("Moxee Recommended Urban Plan Designations and Zoning Map") depicts the detailed urban comp plan designations and zoning that County planning staff are recommending for the unincorporated UGA. It is the same as Moxee's proposal, except that Area 1 would not be rezoned from R-1 to GC.

**6. Major Rezone and Plan Amendment Review Criteria**

YCC 19.36.040 provides that amendments to the zoning map that are contingent upon legislative approval of a comprehensive plan amendment shall be considered a major rezone and are subject to the procedures outlined in YCC 16B.10. Specifically, YCC 16B.10.090 requires that rezones completed as part of the plan amendment process shall be reviewed against the criteria as for plan amendments in Section 16B.10.095; and 16B.10.095 provides the following approval criteria when considering proposed amendments to Yakima County's comprehensive plan:

*(1) The following criteria shall be considered in any review and approval of amendments to Yakima County Comprehensive Plan Policy Plan Maps:*

- (a) The proposed amendment is consistent with the Growth Management Act and requirements, the Yakima County Comprehensive Plan, the Yakima Urban Area Comprehensive Plan and applicable sub-area plans, applicable city comprehensive plans, applicable capital facilities plans and official population growth forecasts and allocations;*
- (b) The site is more consistent with the criteria for the proposed map designation than it is with the criteria for the existing map designation;*
- (c) The map amendment or site is suitable for the proposed designation and there is a lack of appropriately designated alternative sites within the vicinity;*
- (d) For a map amendment, substantial evidence or a special study has been furnished that compels a finding that the proposed designation is more consistent with comprehensive plan policies than the current designation;*
- (e) To change a resource designation, the policy plan map amendment must be found to do one of the following:*
  - (i) Respond to a substantial change in conditions beyond the property owner's control applicable to the area within which the subject property lies; or*
  - (ii) Better implement applicable comprehensive plan policies than the current map designation; or*

- (iii) *Correct an obvious mapping error; or*
- (iv) *Address an identified deficiency in the plan. In the case of Resource Lands, the applicable de-designation criteria in the mapping criteria portion of the land use subchapter of Yakima County Comprehensive Plan, Volume 1, Chapter I, shall be followed. If the result of the analysis shows that the applicable de-designation criteria has been met, then it will be considered conclusive evidence that one of the four criteria in paragraph (e) has been met. The de-designation criteria are not intended for and shall not be applicable when resource lands are proposed for re-designation to another Economic Resource land use designation;*
- (f) *A full range of necessary public facilities and services can be adequately provided in an efficient and timely manner to serve the proposed designation. Such services may include water, sewage, storm drainage, transportation, fire protection and schools;*
- (g) *The proposed policy plan map amendment will not prematurely cause the need for nor increase the pressure for additional policy plan map amendments in the surrounding area.*

Findings: County staff recommends changing the County's comprehensive plan designations in the unincorporated UGA from "Urban" to the more detailed plan designations as shown in Attachment 9. This change is consistent with the comprehensive plan text amendments in Ordinance No. 8-2015 adopted by the BOCC on December 15, 2015. The addition of Area 4 to the UGA should be subject to Moxee's submittal of a capital facilities plan showing how the area will be served with urban facilities.

- (2) *The following criteria shall be considered in any review and approval of changes to Urban Growth Area (UGA) boundaries:*

- (a) *Land Supply:*

- (i) *The amount of buildable land suitable for residential and local commercial development within the incorporated and the unincorporated portions of the Urban Growth Areas will accommodate the adopted population allocation and density targets;*
- (ii) *The amount of buildable land suitable for purposes other than residential and local commercial development within the incorporated and the unincorporated portions of the Urban Growth Areas will accommodate the adopted forecasted urban development density targets within the succeeding twenty-year period;*
- (iii) *The Planning Division will use the definition of buildable land in YCC [16B.02.045](#), the criteria established in RCW [36.70A.110](#) and .130 and applicable criteria in the Comprehensive Plan and development regulations;*
- (iv) *The Urban Growth Area boundary incorporates the amount of land determined to be appropriate by the County to support the population density targets;*

- (b) *Utilities and services:*

- (i) *The provision of urban services for the Urban Growth Area is prescribed, and funding responsibilities delineated, in conformity with the comprehensive plan, including applicable capital facilities, utilities, and transportation elements, of the municipality;*
- (ii) *Designated Ag. Resource lands, except for mineral resource lands that will be reclaimed for urban uses, may not be included within the UGA*

*unless it is shown that there are no practicable alternatives and the lands meet the de-designation criteria set forth in the comprehensive plan.*

Findings: The changes proposed by Moxee and recommended by County staff would reduce the years of growth available in Moxee's UGA from 50 years to 49 years. Moxee indicates that Area 4 is more suitable than Area 3 for urban development and for providing urban services. The addition of Area 4 to the UGA should be subject to Moxee's submittal of a capital facilities plan showing how the area will be served with urban facilities.

- (3) *Land added to or removed from Urban Growth Areas shall be given appropriate policy plan map designation and zoning by Yakima County, consistent with adopted comprehensive plan(s).*

Findings: Attachments 8 & 9 indicate the detailed urban comp plan designations for Areas 3 and 4 if they are removed from, and added to, the UGA, respectively. These designations are consistent with the detailed urban comp plan designation established by Yakima County Ordinance No. 8-2015.

- (4) *Cumulative impacts of all plan amendments, including those approved since the original adoption of the plan, shall be considered in the evaluation of proposed plan amendments.*

Findings: A table showing the cumulative impacts of all proposed amendments being considered in 2016 will be provided as part of the SEPA analysis (file # SEP2016-00006).

- (5) *Plan policy and other text amendments including capital facilities plans must be consistent with the GMA, SMA, CWPP, other comprehensive plan goals and policies, and, where applicable, city comprehensive plans and adopted inter-local agreements.*

Findings: Not applicable. The changes to Moxee's UGA are map amendments rather than policy or text amendments.

- (6) *Prior to forwarding a proposed development regulation text amendment to the Planning Commission for its docketing consideration, the Administrative Official must make a determination that the proposed amendment is consistent with the GMA, CWPP, other comprehensive plan goals and policies, and, where applicable, city comprehensive plans and adopted inter-local agreements.*

Findings: Not applicable. The changes to Moxee's UGA are map amendments rather than policy or text amendments.

## **7. Conclusions**

- a. Detailed urban comprehensive plan designations should be applied to Moxee's unincorporated area in accordance with Section 2.F. of Yakima County Ordinance No. 8-2015, which added detailed urban plan designations to **Plan 2015** (Yakima County's comprehensive plan).
- b. Moxee proposes a change to its UGA boundary to remove 80 acres of residential land and to add 68 acres for residential uses. This swap would reduce Moxee's years of growth from 50 years to 49 years. The addition should be made subject to Moxee's submittal of a capital facilities plan to show how the added area will be provided with urban facilities.

- c. Moxee also proposes to rezone 65 acres from R-1 to GC (Attachment 7, Areas 1 and 2) to be consistent with Moxee's comp plan.
- d. With the possible exception of Area 1, as depicted in Attachment 7, County staff concurs in Moxee's proposed rezones and recommends the detailed urban plan designations and zoning depicted in Attachment 9 for consistency with Yakima County Ordinance No. 8-2015.
- e. Based on current zoning, land within the city limits will accommodate 15 years of growth and land within the UGA will accommodate 50 years of growth, provided that urban water and sewer systems are developed concurrently with growth.
- f. Based on Moxee's proposed rezones, land within the city limits will accommodate 15 years of growth and land within the UGA will accommodate 49 years of growth, provided that urban water and sewer systems are developed concurrently with growth.
- g. Based on County staff's recommended rezones, land within the city limits will accommodate 15 years of growth and land within the UGA will accommodate 49 years of growth, provided that urban water and sewer systems are developed concurrently with growth.
- h. Because urban growth projected to occur for the succeeding 20-year period can be accommodated within Moxee's current UGA, no changes to the designated UGA or to densities permitted therein are required under RCW 36.70A.130(3)(b).
- i. This report meets the County's UGA review requirements under RCW 36.70A.130(3)(a).

#### **8. Staff Recommendations**

Apply the detailed comp plan designations and zoning districts to the City's unincorporated UGA as depicted in Attachment 9.

#### **9. Planning Commission Recommendations**

The Planning Commission's hearing and deliberations on Moxee's UGA were held on May 25, 2016. The Planning Commission voted 4-0 to accept the staff recommendations except as follows: do not add to the UGA the four small lots in Area 4 and the parcel in Area 4 lying south of Postma Road.

Land Use

---

## **Urban Lands**

### **Urban Growth Areas**

**Purpose** The intent of the *Urban Growth Areas* land use category is to implement the Growth Management Act's Planning Goal 1: "Encourage development in urban areas where adequate public facilities and services exist or can be provided in an efficient manner." In determining areas to be set aside for future urbanization, the County and cities mutually endorsed a County-Wide Planning Policy. It states that areas designated for urban growth should be determined by preferred development patterns, residential densities, and the capacity and willingness of the community to provide urban governmental services. The Urban designation is intended to include land that is characterized by urban growth or will be needed for urbanization, consistent with forecasted population growth and the ability to extend urban services. The Urban Growth Area designation is intended to establish the area within which incorporated cities and towns may grow and annex over the next twenty years. Yakima County's Urban Growth Area land use category is also intended to implement Washington Administrative Code, which states that "the physical area within which that jurisdiction's vision of urban development can be realized over the next twenty years." Specific discrete plan designations such as residential, open space, urban reserve, commercial or industrial are found in the respective jurisdiction's comprehensive, subarea or neighborhood plan.

**General Description** In general, an urban growth area extends from each of Yakima County's 14 cities and towns. Since the cities have historically developed in the valley floors, they tend to be surrounded by irrigated agriculture, and are likely to include geologically hazardous areas, wetlands and other wildlife

habitat, or river gravels suitable for mining. "Urban growth" means that land is used so intensively for buildings, structures, and impermeable surfaces that viable agriculture, forestry or mining is not feasible. Urban governmental services are either available, or could be provided without excessive public cost. Urban governmental services typically include water and sewer systems, street cleaning services, fire and police protection services, and public transit services. Based on their respective comprehensive, subarea or neighborhood plans, cities and other service providers must be able to demonstrate both ability and willingness to supply designated urban areas with these services within the 20 year planning period.

In evaluating the quantity of land necessary for urban growth, the following analytical process should be followed:

- 1. Determine how much housing is necessary for 20 years of growth.**

*Subtract the City's current year population from the projected 20 year population figure to determine the additional number that represents 20 years of growth. Based on a city's average household size, calculate the number of additional dwelling units to allow for.*

- 2. Determine the necessary residential acreage.**

*Determine the desired and appropriate housing densities in collaboration with the cities. Calculate how many acres are needed to accommodate the number of new dwelling units based on the desired and appropriate densities. A percentage can be added to allow for market choice and location preference.*

- 3. Determine the necessary commercial and retail acreage.**

**Plan 2015 - Policy Plan**  
Land Use

---

*Divide the existing commercial and retail acreage by the current population to arrive at a commercial/retail acreage per capita figure. Multiply this per capita number by the additional population identified in Step #1. This will give you the amount of additional commercial/retail acreage needed. A percentage can be added to allow for market choice and location preference.*

*Approval of any UGA expansion by Yakima County will be subject to adoption of an adequate and appropriate Capital Facilities Plan by the respective elected legislative body to ensure necessary facilities and services will be provided to the entire expanded UGA within the 20 year period.*

**4. Determine the net amount of total additional acreage needed for non-industrial uses.**

*Determine the currently available undeveloped acreage within the existing UGA for both residential and commercial/retail. Subtract these figures from the acreage identified in Steps # 2 and #3 to determine if acreage is needed for UGA expansion for residential or commercial/retail. Factor in additional acreage needed for open space, critical areas, parks, and other public facilities such as schools and libraries based on appropriate level of service standards. Add appropriate acreage to allow for streets.*

**5. Identify areas needed for Industrial zoning.**

*Industrial zoning is based on the city's economic development strategy and is not contingent on future population.*

**6. Identify areas that are desired and appropriate for expansion.**

*Identify the areas desired for UGA expansion based on the amount of acreage needed as identified in Steps #4 and #5. Ensure the requisite acreage is accurately allocated to residential, commercial/retail, and industrial. Areas desired for expansion should avoid Agricultural and Mineral Resource areas if possible. If Resource areas are unavoidable, justification for encroaching into the Resource area will be required.*

**7. Capital Facilities Plan.**

Unincorporated Total	85,410	117,983	32,573
Incorporated Total	163,390	200,511	37,121
Moxee	3,720	7,701	3,981

Source: Office Financial Management (OFM) and Yakima County.

The Office of Financial Management (OFM) has Moxee at an estimated population of 3,720 for 2014. Yakima County is projecting Moxee's population at 7,701 in the year 2040. That is an increase of 3,981 individuals over the twenty-six year timespan. This allocation of 3,981 individuals will be used by Yakima County and the City of Moxee as part of the upcoming Urban Growth Area analysis and for other comprehensive planning needs.

Yakima County	110,603	318,494	143,322	32,719
Moxee	1,610	7,701	3,535	1,925

Source: 2008-2012 American Community Survey US Census, Office of Financial Management and Yakima County.

The 2008-2012 American Community Survey US Census has Moxee at an estimated civilian labor force of 1,610 for 2012. Yakima County is projecting Moxee's civilian labor force at 3,535 in the year 2040. That is an increase of 1,925 jobs over the twenty-eight year timespan. This allocation of 1,925 jobs will be used by Yakima County and Moxee as part of the upcoming Urban Growth Area analysis and for other comprehensive planning needs.
