

From Washington State organizations and governments concerned about drug abuse, accidental poisonings, and environmental contamination

A SAFER WAY TO DISPOSE OF UNWANTED HOUSEHOLD MEDICINES

DRUG TAKE-BACK PROGRAMS ARE THE SAFEST SOLUTION FOR UNWANTED MEDICINES

FIRST. Do not flush medicines down the toilet or drain. Flushing drugs adds to pollution in our waters because wastewater and septic systems are not designed to treat these chemicals. The White House Office of National Drug Control suggests some specific drugs be flushed; however, we view that practice as too harmful to the environment.

SECOND. Use community drug take-back programs for proper disposal. The Medicine Return Program has 37 locations in six counties in Washington. Take your unwanted medicines to one of the Group Health or Bartell Drugs locations that offers this service. Note that we cannot accept controlled substances (e.g., Oxycontin, Vicodin, etc.). Disposing of your medicines at one of these locations will ensure that your medicines will not be stolen from the garbage and will not enter our environment through landfill leachate. **For locations and more information, go to www.medicinereturn.com.**

LAST CHOICE. If a collection program for unwanted medicines is not available near you, mix your medicines with an undesirable substance, such as cat litter or used coffee grounds, put this into a container with a lid, conceal personal information and place the sealed container in the trash. Make sure your trash cannot be accessed by children, pets, or others who might be looking in garbage for drugs. Putting unwanted medicines in the trash is better than flushing, but it is not the best solution to protect people and our environment. Trash disposal is not as secure – especially for controlled substances, like pain killers, which are often abused. And trash disposal does not fully protect the environment because medicines in landfills can eventually escape into our environment when landfill liquids are sent to sewage treatment plants.

WE ARE WORKING TO CREATE A STATEWIDE SYSTEM TO COLLECT AND SAFELY DISPOSE OF UNWANTED MEDICINES

The critical missing link in the U.S. is a source of long-term financing for household medicine return. In British Columbia and several European countries, drug manufacturers are required to provide a medications return program.

This information follows the *White House Office of National Drug Control Policy guidelines*, and also includes advice specific to *Washington State*.

For more information go to:
www.whitehousedrugpolicy.gov/publications/pdf/prescrip_disposal.pdf

We support the creation of a secure, ongoing medicine return program provided and financed by drug producers
